

# Assignment for Frontend Internship

Use React, Angular or jQuery to create a live text editor with the following features

1. A user should be able to select a group of consecutive words or letters and apply “bold” or italic style to them.

2. The program should be able to detect line endings(periods) and allow other users to add comments on the line. (This is OPTIONAL, extra marks for this.)  
Note: Design a simple backend to store and retrieve these comments

2. The program should be able to detect line endings(periods) and allow other users to add comment on the line.

3. You should Bootstrap as far as possible.
4. You **should not** use libraries like QuillJS, SlateJS, etc., for the editor. However, you **can** use libraries for individual components like buttons, toolbars, etc.
